System Requirements Document

Corporate Wellness Platform — StackBuilders

Version 3.0

1. Preface

This document provides a comprehensive overview of the system requirements for the Corporate Wellness Platform — StackBuilders. It is intended for the following audiences:

- Project team members responsible for the design, development, and deployment of the platform.
- Stakeholders who wish to understand the scope, functionality, and constraints of the system.
- Quality assurance teams responsible for validating the system against the defined requirements.
- Future developers and maintainers who need to understand the system's architecture and behaviour.

The objective of this document is to clearly outline the functional and non-functional requirements, define the roles and responsibilities of different user types, and describe the key workflows supported by the system.

Version history

Version 1.0 | Date: 31-1-2026 | Description: Initial submission

Version 2.0 | Date: 08-3-2026 | Description: made some minor changes in workflows

Version 3.0 | Date: 17-10-2026 | Description: Added Supervisor role, Wellness Check-ins, Consultation Time Allocation Management, Company Onboarding Requests, Query/Support System, RBAC Permission Management, Subscription & Pricing Plans, Bulk User Import, and Reward Claiming functionalities

Rationale for Version Creation

Version 3.0 has been created to align the SRS document with the current state of the implemented platform. Several significant modules and an entirely new actor (Supervisor) have been developed and deployed since the original SRS was authored. This version formally documents those additions, including Wellness Check-ins, Consultation Time Slot Allocation Management, Company Onboarding Request workflows, a Query/Support System, Role-Based Access Control (RBAC) Permission Management, Subscription & Pricing Plans, Bulk User Import, and Reward Claiming. No changes have been made to the existing diagrams.

2. Introduction

The Corporate Wellness Platform is a centralized digital solution designed to support organizations in managing employee wellness programs. The platform connects employees with qualified wellness experts and provides a structured environment for conducting wellness activities such as live sessions, consultations, video content, wellness check-ins, and challenges.

The system supports six distinct user roles, each with specific responsibilities:

i) Employees can access wellness services, participate in live sessions and consultations, submit periodic wellness check-ins, book consultation time slots, claim rewards, and provide feedback.

ii) Wellness experts can manage sessions and content, review and respond to employee wellness check-ins, configure consultation availability time slots, and create follow-up consultations.

iii) HR can manage wellness experts, create challenges and rewards, manage employee and expert rosters via individual or bulk import, and subscribe to pricing plans.

iv) Administrator can manage the system, including user accounts, roles, platform settings, and audit logs.

v) Supervisor can oversee the entire platform across all companies, manage company onboarding requests, provision users and companies, respond to support queries, manage role-based access permissions, and monitor revenue and reports.

vi) External platforms (e.g., video conferencing tools) are used to facilitate live sessions and consultations.

3. Glossary

Wellness Expert: A professional who provides wellness guidance and support to employees through live sessions, consultations, video content, and wellness check-in reviews. Wellness experts are categorized into three specializations: Physical Wellness Instructor, Nutritionist, and Psychologist.

Wellness Program: A structured initiative organized by an organization to promote employee well-being, encompassing live sessions, consultations, video libraries, wellness check-ins, and challenges.

Consultation: A one-on-one interaction between an employee and a wellness expert, scheduled through the platform. Consultations can be booked via pre-defined time slots or general requests, and are conducted over an external meeting platform.

Consultation Time Slot: A 15-minute availability interval defined by a wellness expert for a given day (e.g., 09:00–09:15, 09:15–09:30). Employees can book these slots when requesting consultations. The system automatically detects conflicts with existing bookings and filters

out expired slots.

Live Session: A group wellness session conducted by a wellness expert for multiple employees. Sessions can be of types Video Session, Workshop, or Webinar, and are hosted via an external meeting platform with configurable maximum participants.

Video Library: A categorized repository of recorded wellness content uploaded by wellness experts. Videos are organized into three categories: Health Related, Mind Relaxation, and Physical Wellness. The system supports MP4 file uploads with automated duration detection and thumbnail frame capture.

Physical Wellness Instructor: A wellness expert specializing in physical fitness, exercise programs, and physical activity guidance.

Nutritionist: A wellness expert specializing in dietary guidance, nutrition planning, and healthy eating habits.

Psychologist: A wellness expert specializing in mental health support, stress management, and psychological well-being.

Rating: A quantitative evaluation provided by employees after attending live sessions, consultations, or watching video content.

Platform Settings: Configuration options for the administrator to manage security, data privacy, session management, and audit logging.

Employee: An organization member who uses the platform to participate in wellness programs, attend sessions, book consultations, submit wellness check-ins, claim rewards, and provide feedback.

Supervisor: A high-level platform administrator who oversees operations across all registered companies. The supervisor manages company onboarding requests, provisions user accounts and companies, responds to user support queries, configures role-based access permissions (RBAC) for HR, Employee, and Wellness Expert roles, and monitors platform-wide analytics, revenue, and reports.

Wellness Check-in: A periodic self-assessment form submitted by an employee to track their wellness across three specialized tracks: Mental Wellness (stress, mood, sleep, focus scores), Physical Wellness (activity minutes, step count, pain, mobility, recovery scores), and Diet/Nutrition (meal consistency, water intake, energy score, nutrition goals). Check-ins are reviewed by the corresponding wellness expert who can respond with suggestions and create follow-up consultations for high-priority cases.

Company Onboarding Request: A self-service registration request submitted by a prospective company through the public landing page. The request includes company details and HR contact information. Supervisors review, approve, or reject these requests. Approval automatically provisions the company

workspace and initial HR account.

Subscription Plan: A tiered pricing model that determines the capacity and features available to a company. Three plans are offered: Starter (₹100/month — up to 100 employees, 10 experts), Business (₹200/month — up to 1,000 employees, 50 experts), and Enterprise (₹300/month — up to 10,000 employees, 100 experts).

Query/Support System: A communication channel through which employees, HR managers, and wellness experts can submit questions or support requests to the platform supervisor. The supervisor reviews and responds to queries, updating their status from Open to Replied.

Role-Based Access Control (RBAC): A fine-grained permission management system that allows the supervisor to dynamically configure Create, Read, Update, and Delete permissions for HR, Employee, and Wellness Expert roles across resource modules such as user management, client management, challenge management, and reports.

Bulk Import: A feature allowing HR managers to upload Excel (.xlsx, .xls) or CSV files to register multiple employees or wellness experts simultaneously. The system validates column formats, checks company capacity limits against the active subscription plan, and provides a detailed import summary.

Reward: An incentive item in the company rewards catalog that employees can claim using accumulated reward points earned through wellness challenges. Each reward has a point cost, description, and claimable quantity.

4. User Requirements Definition

Employees should be able to:

1. Access all available wellness programs on the platform from a single centralized dashboard.
2. Enroll in and attend live wellness sessions conducted by experts.
3. Access recorded wellness video content from the video library.
4. Request and participate in one-on-one wellness consultations with experts, including booking specific availability time slots.
5. Submit periodic wellness check-ins across Mental Wellness, Physical Wellness, and Diet/Nutrition tracks to monitor their well-being.
6. View expert responses, suggestions, and follow-up recommendations on their submitted wellness check-ins.
7. Participate in company wellness challenges and claim rewards using earned points.
8. Submit feedback, ratings, and support queries through the platform.

Wellness Experts should be able to:

1. Conduct live wellness sessions and one-on-one consultations with employees through the platform.
2. Upload and manage wellness-related video content in the video library.
3. Configure consultation availability time slots and manage incoming consultation requests from employees.
4. Review, prioritize, and respond to employee wellness check-ins submitted under their specialization, and create follow-up consultations for high-priority cases.

HR should be able to:

1. Manage the roster of wellness experts (Physical Wellness Instructors, Nutritionists, Psychologists) and employees within their organization, including individual and bulk import registration.
2. Create, manage, and monitor wellness challenges and rewards programs for employees.
3. Subscribe to a pricing plan that determines the organization's capacity for employees and experts.

Admin should be able to:

1. Manage user accounts, assign roles (HR, Wellness Expert, Employee), and configure platform settings including security, data privacy, and audit logging.
2. Monitor system activity, review audit logs, and maintain the overall availability of the platform.

Supervisor should be able to:

1. Oversee and manage all registered companies, user accounts, and platform-wide operations from a unified workspace.

2. Review, approve, or reject company onboarding requests, and provision new companies along with their initial HR accounts.

3. Respond to support queries submitted by employees, HR managers, and wellness experts across all organizations.

4. Configure and manage role-based access control (RBAC) permissions for HR, Employee, and Wellness Expert roles, including the ability to reset permissions to platform defaults.

5. Monitor platform-wide analytics, reports, revenue, subscription data, and payment transaction history.

The system should also meet non-functional requirements such as:

1. The platform should be accessible on modern web browsers and provide a responsive user experience across devices.

2. The platform should ensure secure handling of user data, implement role-based access control, and protect sensitive information through encryption.

3. The platform should be scalable to support growing numbers of users, companies, sessions, and content without performance degradation.

5. System Requirements Specification

i) Functional Requirements

User Authentication and Authorization:

1. The system shall allow users to log in using valid credentials (Gmail and password).

2. The system shall authenticate users before granting access to the platform and redirect them to the appropriate role-based dashboard (Employee, Wellness Expert, HR, Admin, or Supervisor).

3. The system shall provide role-based access to system features, enforcing fine-grained RBAC permissions configured by the supervisor.

4. The system shall allow users to log out securely, clearing session state and redirecting to the public landing page.

5. The system shall allow users to update their account credentials and profile information.

Employee Functional Requirements:

1. The system shall allow employees to view all available wellness programs on one centralized dashboard, including active challenges, upcoming live sessions, video library highlights, and expert categories.

2. The system shall allow employees to enroll in live wellness sessions filtered by expert category (Psychologist, Physical Wellness Instructor, Nutritionist).

3. The system shall allow employees to attend live wellness sessions by joining the session via the provided meeting link.

4. The system shall allow employees to access recorded wellness sessions from the categorized video library (Health Related, Mind Relaxation, Physical Wellness) with in-app video playback.

5. The system shall allow employees to request and participate in wellness consultations with experts, including the ability to select a specific expert, specify the purpose of consultation, and book an available 15-minute time slot.

6. The system shall allow employees to view their consultations organized by status: Upcoming (accepted/approved with Join Session link), Requested (pending approval), Rejected (with rejection reason), and Previous (completed history).

7. The system shall allow employees to submit feedback and ratings for wellness programs, live sessions, and consultations.

8. The system shall allow employees to track their wellness participation history.

9. The system shall allow employees to submit periodic wellness check-ins across three specialized tracks: Mental Wellness (stress score, mood score, sleep hours, focus score, support needed), Physical Wellness (activity minutes, step count, pain score, mobility score, recovery score, workout focus), and Diet/Nutrition (meal consistency, water

intake, energy score, servings count, nutrition goal).

10. The system shall allow employees to view their check-in submission history with priority indicators (Stable, Medium Priority, High Priority) and review expert responses, suggestions, and coaching messages attached to their submissions.

11. The system shall allow employees to participate in company wellness challenges, accumulate reward points, and claim rewards from the company rewards catalog based on their point balance and reward availability.

12. The system shall allow employees to submit support queries to the platform supervisor and receive responses through the query system.

Wellness Expert Functional Requirements:

1. The system shall allow wellness experts to conduct live wellness sessions for employees, with support for creating sessions of types Video Session, Workshop, or Webinar, configuring date, time, duration (30, 45, 60, 90 minutes), maximum participants, and providing a meeting link.

2. The system shall allow wellness experts to provide one-to-one wellness consultations to employees, including accepting or rejecting consultation requests, scheduling accepted consultations with date, time, duration (15, 30, 45, 60 minutes), and meeting link.

3. The system shall allow wellness experts to upload and manage wellness-related video content in the video library, with support for MP4 file uploads (up to 250 MB), automated video duration detection, automated thumbnail frame capture, custom thumbnail upload, and external video link entry.

4. The system shall allow wellness experts to view participant attendance for wellness sessions and track session ratings and completion status.

5. The system shall allow wellness experts to review employee feedback and ratings.

6. The system shall allow wellness experts to communicate with employees through the platform, including responding to wellness check-ins with suggestions and coaching messages.

7. The system shall allow wellness experts to configure consultation availability time slots in 15-minute intervals (09:00 to 16:45) for today and tomorrow, with automated conflict detection that disables slots overlapping existing scheduled consultations or past time periods.

8. The system shall allow wellness experts to review employee wellness check-ins filtered by their specialization (psychology, nutrition, or physical fitness), with a priority queue highlighting high-priority check-ins based on rule-based scoring (e.g., stress >= 8, mood <= 3, pain >= 8, low hydration, explicit urgent support requests).

9. The system shall allow wellness experts to create follow-up consultations directly from a high-priority wellness check-in, automatically linking the consultation to the source check-in.

10. The system shall allow wellness experts to submit support queries to the platform

supervisor through the query system.

HR Functional Requirements:

1. The system shall allow HR to view all wellness programs available on the platform, including employee and expert counts, scheduled live sessions, and active challenges and rewards.

2. The system shall allow HR to manage wellness experts, including adding Physical Wellness Instructors, Nutritionists, and Psychologists individually or via bulk spreadsheet import (Excel .xlsx/.xls or CSV), and removing/deactivating experts.

3. The system shall allow HR to manage employees, including adding employees individually or via bulk spreadsheet import (Excel .xlsx/.xls or CSV) with row-by-row validation, and removing employees.

4. The system shall enforce subscription plan capacity limits when HR adds users: Starter plan (up to 100 employees, 10 experts), Business plan (up to 1,000 employees, 50 experts), Enterprise plan (up to 10,000 employees, 100 experts). The system shall block user creation if the company has no active subscription or exceeds plan capacity.

5. The system shall allow HR to create, manage, edit, and delete wellness challenges with configurable name, goal, reward points, and deadline.

6. The system shall allow HR to create, manage, and delete rewards in the company rewards catalog with configurable name, point cost, claimable quantity, and description.

7. The system shall allow HR to view ratings related to wellness programs and experts.

8. The system shall allow HR to browse and subscribe to pricing plans (Starter, Business, Enterprise) and process payments.

9. The system shall allow HR to access the categorized video library and manage profile settings.

10. The system shall allow HR to submit support queries to the platform supervisor through the query system.

Administrator Functional Requirements:

1. The system shall allow the admin to manage the database of the platform, including all user accounts, companies, and system data.

2. The system shall allow the admin to assign and manage roles and access permissions.

3. The system shall allow the admin to configure platform settings, including security, data privacy, and audit options.

4. The system shall allow the admin to monitor audit logs and system activity.

5. The system shall allow the admin to manage system-wide communication settings.

6. The system shall allow the admin to maintain the overall availability and reliability of the platform.

Supervisor Functional Requirements:

1. The system shall provide the supervisor with a dedicated workspace displaying a

high-level operational overview including KPI stat cards (Total Users, Active Users, System Activity across consultations, sessions, videos, challenges, and rewards), quick action shortcuts, and a workspace pulse activity stream showing recent events across all companies.

2. The system shall allow the supervisor to manage company onboarding requests, including viewing incoming registration requests with company name, email, HR applicant contact, and submission date, and approving or rejecting requests. Approving a request shall automatically provision the company workspace and initial HR manager account.

3. The system shall allow the supervisor to manually provision new companies along with their initial HR accounts by providing company details (name, email, phone, address) and HR credentials (name, phone, Gmail, password).

4. The system shall allow the supervisor to manage a unified multi-role user directory with search and filtering capabilities (by name, email, company, and role), and provision new user accounts (Employee, HR, Wellness Expert) with role-specific fields (department for employees; specialization and years of experience for experts).

5. The system shall allow the supervisor to view platform-wide reports and analytics, including monthly user growth charts, role distribution charts, workspace activity charts (consultations, sessions, videos, challenges, rewards), and summary metrics (total companies, consultations, live sessions, video library items).

6. The system shall allow the supervisor to view financial analytics including total revenue, active subscriptions count, average revenue per company, revenue by plan (Starter, Business, Enterprise), monthly revenue trends, and a payment transaction history with payment ID, company, plan, amount, status, and date.

7. The system shall allow the supervisor to review and respond to support queries submitted by employees, HR managers, and wellness experts. Responding to a query shall update its status from Open to Replied and flag it as unread by the original sender.

8. The system shall allow the supervisor to manage fine-grained role-based access control (RBAC) permissions for HR, Employee, and Wellness Expert roles. The supervisor shall be able to toggle Create, Read, Update, and Delete permissions for resource modules (user management, challenge management, client management, reports), with auto-save on toggle and the ability to reset permissions to platform defaults.

9. The system shall allow the supervisor to manage their profile settings (name, age, gender, email, phone) and security settings (password change with validation).

Company Onboarding and Subscription Functional Requirements:

1. The system shall provide a public landing page with information about the platform features, pricing plans, expert categories, and an onboarding guide.

2. The system shall allow prospective companies to submit self-service onboarding requests through the public landing page, providing company name, email, contact name, contact email, phone, employee count, and a message.

3. The system shall allow authenticated users to edit their profile information including

name, phone, age, gender, and additional notes through a shared profile edit page.

ii) Non-Functional Requirements

Performance Requirements:

1. The system shall load pages within 3 seconds under normal operating conditions.

2. The system shall support concurrent access by multiple users without performance degradation.

3. The system shall provide real-time background data polling and auto-refresh for dashboard views, consultation statuses, check-in updates, and query responses.

Security Requirements:

1. The system shall enforce role-based access control across all features and resources using fine-grained RBAC permission gates.

2. The system shall encrypt sensitive user data, including passwords.

3. The system shall implement session timeout policies configurable through platform settings.

4. The system shall validate all form inputs including email format, password minimum length (6 characters), age ranges (18-99), and file size limits (250 MB for videos, 10 MB for thumbnails).

Privacy Requirements:

1. The system shall ensure that user data is only accessible to authorized roles as defined by the RBAC permission matrix.

2. The system shall allow administrators to configure data visibility rules per role.

3. The system shall ensure that wellness check-in data is only accessible to the submitting employee and the corresponding specialized wellness expert.

Usability Requirements:

1. The system shall provide an intuitive, responsive user interface accessible across desktop and mobile devices.

2. The system shall provide accessible scroll-reveal animations that respect the user's prefers-reduced-motion system preference.

3. The system shall provide clear feedback for all user actions through success toasts, error messages, loading states, and confirmation dialogs.

Scalability Requirements:

1. The system shall be designed to scale horizontally to support an increasing number of companies, users, and wellness content.

2. The system shall support tiered subscription plans with configurable capacity limits to manage organizational growth.

Reliability Requirements:

1. The system shall be designed to recover gracefully from errors and maintain data integrity during failures.

2. The system shall provide optimistic UI updates with automatic rollback on network errors (e.g., permission toggle reversals).

Compatibility Requirements:

1. The system shall be compatible with modern web browsers (Chrome, Firefox, Safari, Edge).

2. The system shall provide a responsive layout that adapts to desktop, tablet, and mobile screen sizes.

Audit & Logging Requirements:

1. The system shall log all significant user activities, including account creation, role changes, and data modifications.

2. The system shall allow administrators to search audit logs by role (HR, Employee, Wellness Expert) and view activity history.

3. The system shall maintain a cross-platform recent activity feed showing events across all companies for supervisor and admin dashboards.

Backup & Recovery Requirements:

1. The system shall support periodic data backups to prevent data loss.

2. The system shall provide mechanisms for data recovery in case of system failures.

Compliance Requirements:

1. The system shall comply with applicable data protection regulations.

2. The system shall provide mechanisms for users to request access to or deletion of their personal data.

Diagrams

Note: All existing diagrams — Use Case Diagram, Activity Diagrams (1–9), and Sequence Diagrams (1–6) — remain unchanged from Version 2.0. Refer to the original SRS.pdf pages 11–27 for the complete diagram set.
